

Becoming a Bricoleur

HUMAN MODE

Pocket card · Lead with what you have — memory, tools, people already in the room.

Don't wait for ideal conditions. Forage. Recombine. Ship a rough artifact.

60-SECOND MEMORY FORAGE

1. Name the challenge in one sentence.
2. Timer: 60 seconds.
3. Summon a specific person (grandmother, former boss, child...).
4. Ask: *How would they solve this with what they had?*
5. Write one usable next move — not the perfect plan.

MATERIAL 1

Lived memory

Who have I known who solved a cousin of this?

MATERIAL 2

Tools at hand

What is already paid for, built, or one hop away?

MATERIAL 3

Constraints

What design parameter forces a smarter combination?

Before we name what we don't have, let's name what we do — including who here has solved a cousin of this problem somewhere else.

THIS WEEK

1. Inventory the room before the gap list.
2. Pair two “odd” tools on one stuck problem.
3. Ship a rough artifact in 24 hours that can be wrong in public.

Close: You do not need ideal conditions to begin. You need a forage, a recombination, and a rough artifact.
